## **DETAILED ACTION**

### ***Double Patenting***

1. Claims 1-5 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 24-27 of copending Application No. 10/957,355. Although the conflicting claims are not identical, they are not patentably distinct from each other because of reasons described in the previous Office actions. Since this application might mature into a patent before the instant application, the rejection is maintained.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

### ***Claim Rejections - 35 USC § 103***

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Abramson et al. 5,569,696, in view of 3M Innovative Properties Company WO 03/082997.

4. The rejection made previously is maintained for the reasons elucidated below.

### ***Response to Arguments***

5. Applicant's arguments filed 9/14/07 have been fully considered but they are not persuasive. Applicants' claims do not exclude cement. Furthermore, Abramson et al. disclose both a liquid admix for standard Portland cement grout and a one component, pre-mixed paste, which obviously contains no cement, as proven by the formulations in

Art Unit: 1796

Examples 1-4. The urethane oligomer of the 3M patent is identical to the urethane oligomer of applicants'. The 3M patent refers to cement only as a substrate, not as an ingredient of the grout. The examiner does not understand what applicants mean by "protective materials". Abramson et al. disclose calcium carbonate (limestone), silica (sand), biocide, surfactant and titanium dioxide in Examples 1-4. It is not argued that the urethane of the primary reference is not different than that of applicants'. If it were the same, the rejection would be for anticipation, not obviousness. The whole point of the instant rejection is that since 3M's polyurethane has superior stain resistance, it would have been obvious to substitute it in the place of the fully cured aliphatic polyurethane of Abramson et al.

### ***Conclusion***

6. This is a RCE of applicant's earlier application. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 1796

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
